

## YOU WILL NEED:

- Color Printer;
- Hot Glue Gun with Hot Glue Sticks or other strong adhesive;
- Scissors or Xacto Knife;
- 8.5" x 11" White Cardstock (I recommend 80 or 110 lb.);
- Wooden dowels, paper straws, or bamboo skewers for holding props.

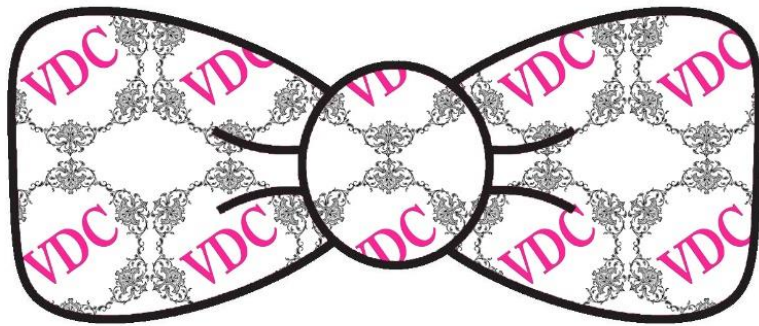

## INSTRUCTIONS:

1. Download and save the props to your computer (this way you can have them on hand in case you want to print more in the future.);
2. Print the photo props onto white cardstock (We recommend 80 or 65 lb.). Be sure your printer is set to print a BORDERLESS, MARGINLESS, FIT TO PRINT OR FULL BLEED 8.5"x11" print. It will need to be a NO MARGIN setting to allow the designs to print to the correct size;
3. Cut out the prop shapes using your scissors (Xacto knife can come in handy on the trickier shapes, such as glasses or mustaches);
4. Position the stick of your choice near to the middle or edge of the cut-out, and secure with hot glue or other strong adhesive. Check out your local dollar store to find inexpensive skewers, or your local craft stores for wooden dowels.
5. Allow to dry and then get your cameras ready!
